

### **Aquawood Covapro 20**

5023

Water-based, matt, opaque finishing coat for wooden windows and front doors for industrial and professional use

It has been matched as a system with a 3-coat structure

|  | PRODU | ICT DESC | RIPTION |
|--|-------|----------|---------|
|--|-------|----------|---------|

#### General

Water-based, matt, opaque finishing coat with excellent weathering resistance and permanent elasticity. The product is characterized by a high level of block resistance, very good impact strength, quick resistance to water, short drying times and good feel of the surface. Good firmness on vertical surfaces combined with optimal flow. Particularly low number of micro-bubbles with airless spray application as a result of highly active de-foaming and de-aerating agents. The product is formulated without the addition of biocidal active agents to protect against blue stain and wood-destroying fungi.

## Special properties and standards

- DIN 53160-1 bzw. DIN 53160-2 Perspiration and saliva proof properties
- ÖNORM EN 71-3 Safety of toys; migration of certain elements (free of heavy metals)
- Meets the criteria of baubook "Ecological invitation to tender"
- French ordinance DEVL1104875A regarding the marking of construction coating products for their emission of volatile pollutants: A+

#### **Application area**

#### For dimensionally stable timber components for exterior and interior use, such as e.g. wooden windows and front doors.

- For humid areas (e.g. indoor pools) only with a special coating system.
- For non-dimensionally stable timber components we recommend Pullex Color 4403 or Pullex Aqua-Color 5325.
- Please observe the relative technical data sheets of the products.

#### **PROCESSING**

#### Instructions for use

- Please stir the product before use. However, prevent entry of air while stirring.
- The temperature of the product and object, and the room temperature must be at least + 15 °C.
- The optimal conditions for use are between 15 25 °C with a relative atmospheric humidity between 40 – 80 %.
- Too high dry film thicknesses beyond around 120 µm reduce the diffusion capacity and should thus be avoided.
- Sealants must be compatible with the coat and may only be applied once the paint has dried through. Sealing profiles with plasticizers tend to stick together in combination with paints. Please only use those types that have been tested.
- When changing from Aquawood Covapro 20 5023 to other waterbased paint systems, care must be taken to adequately clean the pipes and spray equipment, preferably with warm water.
- Please follow our ARL 300 Working guideline for coating dimensionally stable and limited dimensionally stable construction elements - General part along with all standards and guidelines for window construction.

#### Application technique

| Spraying dis-<br>tance (cm)                                    | approx. 25                                   |  |           |
| Thinner  | water  |  |           |
| Thinner-<br>added in %   | 0-5 0-5 10                                   |  |           |
| Wet film (µm)  | 150 – 300 depending on the intermediate coat |  |           |
| Yield per applica-<br>tion (g/m²) <sup>1)</sup>                | 300 – 600 depending on the intermediate coat |  |           |
| Dry film complete coating system (µm)                          | 100 up to max. 120                           |  |           |
| 1) Yield including addition of thinner and loss while spraying |  |  |           |

The shape, the properties and moisture of the substrate affect the consumption/yield. Accurate values for consumption must be obtained by applying trial coats in advance.

### **Drying times**

(at 23 °C and 50 % rel. humidity)

| Dust-dry (ISO 1517)                       | after approx. 1 hour |
|---|----------------------|
| Tack-free                                 | after approx. 3      |
|   | hours                |
| Stackable with PE fine foam spacers at    | after approx. 5      |
| room temperature:                         | hours                |
| Stackable with PE fine foam spacers after | after approx. 130    |
| forced drying:                            | min.                 |
| 20 min flash-off zone                     |                      |
| 90 min drying stage (35– 40 °C)           |                      |
| 20 min cooling phase                      |                      |

The figures given above are reference values. The drying time depends on the type of substrate, coat thickness, temperature, air exchange and relative atmospheric humidity.

Lower temperatures and/or high level of atmospheric humidity can increase the drying time.

Avoid direct sunlight (very quick drying).

# Cleaning the working equipment

With water immediately after use.

To remove dried paint residues, we recommend using Aqua-Cleaner 80080 (diluted 1:1 with water).

|                    | SUBSTRATE   |
|--------------------|---|
| Type of substrate  | Wood in accordance with the guidelines for window construction.   |
| Substrate property | The substrate must be dry, clean, capable of holding the paint, free from separating substances such as grease, wax, silicone, resin etc. and free from wood dust, as well as tested for suitability for coating. |
| Wood moisture      | 13 % +/- 2 %  |
|                    | COATING SYSTEM  |
