Water-based, radiation-curing structural effect pigment coating for furniture and interior finishing for industrial use

	PRODUCT DESCRIPTION		
General	Water-based structural effect pigment coating for closed-pore, coated wood surfaces in the furniture sector. The coating material is cured with the help of two different cross-linking mechanisms (curing by radiation and 2-component polyurethane cross-linking). With the help of this special curing system (Dual cure), even those areas of the work-piece that are inadequately illuminated by the beams – opaque spots – are cross-linked completely. Good mechanical and chemical resistance, excellent light resistance, good filling power, very good stackability.
